Latest Projects:

#1

Title Contentful
Client Name Heineken, Netherlands
Role Contentful CMS architecture

Project Description

This is a project for Heineken Netherlands. Where Contentful was used as a CMS to manage content, images and media. I was involved in this project from beginning estimation to go live and worked as an CMS architect. I lead this of Contentful and was involved in content modeling, Apis, creating records as per Figma files, multilingual setup, deployment and access.

Responsibilities:

- Identifying content types.
- Creating content structure and records as per figma designs.
- Creating Apis to deliver data to the frontend.
- Api testing and content reports reports.

#2

Title Contentful
Client Name Sepcsavers, United Kingdom
Role Contentful CMS developer/GDPR cookie manager

Project Description

This is a project for one of the largest eyewear companies in Europe. Where Contentful was used as a CMS to manage content, images and media. I was involved in this project from beginning estimation to go live. I lead this of Contentful and was involved in content modeling, Apis, creating records as per Figma files, multilingual setup, deployment and access.

Responsibilities:

- Identifying content types.
- Creating content structure and records as per figma designs.
- Creating Apis to deliver data to the frontend.
- Api testing and content reports reports.

#3

Title Powercloud
Client Name Powercloud GMBH, Germany
Role Sr. PHP developer

Project Description

Powercloud platform is developed specially for utility companies offering digital processes for the sales, processing and billing in Munich, Germany

This project is for one of the big 4 Electricity and Gas providers in Germany. This is developed on the PowerCloud platform which is in PHP/MySQL.

Various PowerCloud features were used/customized through apis to communicate between frontend and salesforce.

Creating order, meter readings, invoicing are the main features that I worked on.

Responsibilities:

- Worked as a Sr. PHP developer on this project to develop new feature to the the existing powercloud application using PHP 8 (Symfony) and MySQL.
- Unit testing using PHPUnit.
- Resolving any bug tickets on the scrum board.
- Reviewing pull requests of other developers in bitbucket.
- Using Postman for api testing and updating data in system as needed.

#4

Title Golf Surprise
Client Name Golf Surprise, Australia
Role PHP developer/Team Lead

Project Description

This is the web application for golf players in Australia where users can buy and utilize credits on game day to win prizes by answering survey questions or how well they

played that day as compared to the score offered by the system. The admin interface of the application provides all the reports and information of all players playing each day.

Responsibilities:

- Understanding requirements from clients.
- Database design.
- Develop web application using PHP/MySQL as per requirements.
- Testing and bug fixing.
- Leading team of developers, supporting team to get tasks done.
- Pull requests review in bitbucket.

#5

Title EDF energy
Client Name EDF, United Kingdom
Role Team Lead/Drupal developer

Project Description

Project is to provide a user interface to one of the biggest Gas and electricity providers in the UK. The web application is developed in Drupal 7 providing features to register, login, my account, change tariff, view account activities, pay bills, Submit meter read, view tariff details, digital appointment booking and contact us. AWS apis are used to get and put information in SAP. Various third party services are used to validate email ids, send SMS, Chat, screen share etc.

Responsibilities:

- Understanding requirements from the onshore team co-ordinator.
- Identifying and creating drupal content types as needed.
- Develop web application using Drupal and MySQL database.
- AWS api integrations to display necessary information to a logged in user and store any information that user updates.
- Leading team of developers, supporting team to get tasks done.
- Reviewing pull requests of other developers in bitbucket.

#6
